

D - GREASE

Heavy duty degreaser and cleaner with superior oil, petrol and hydrocarbon remediating properties which eliminates waste disposal costs and reduces health and safety risks.

NATURAL BIOREMEDIATION

Bioremediation is the process of using bio-enzymes to naturally convert hazardous chemicals, such as hydrocarbons, into the non-toxic by products of carbon dioxide and water. It provides the opportunity for facilities to eliminate or reduce hazardous waste, workplace health and safety risks and environmental liability and costs.

ENZYME CLEANING EXPLAINED

GREENMAN D GREASE microbes are so powerful that they quickly remove even the heaviest build-ups of oil, grease and grime from the toughest industrial environments. Greenman bacteria intelligently produce enzymes to digest practically any hydrocarbon into water and carbon dioxide, in an ongoing and repeating process. Greenman microbes are uniquely cultivated from South African soils giving them a massive home ground performance advantage. They are safe, non-pathogenic with no hazard potential.

PRODUCT DESCRIPTION

GREENMAN D GREASE is a powerful water-based bio-remediating cleaner with superior cleaning capabilities, which eliminates waste disposal costs and health and safety risks. Effectively converts gasoline (BTEX), diesel, motor oils, fuel oils, grease, antifreeze, hydraulic, brake, ATF, cutting fluids, as well as heavy synthetic oils and greases into carbon dioxide and water. GREENMAN D GREASE prevents slip-and-slide accidents by removing greasy film, leaving surfaces dry and oil-free. Reduces the ability of flammable hydrocarbons to ignite making it ideal for oil, fuel tank and confined space cleaning.

INTERNATIONAL BENCHMARK

A petrochemical company presented their current internationally established benchmark bacterial product to performance challenge against the indigenous bacteria in Oil Gobbler™. Our local bacteria showed virtually identical Total Petroleum Hydrocarbon (T.P.H.) degradation, while costing a fraction of the price. An unexpected result showed our GREENMAN D GREASE bacteria degrading waste at a staggering 20% faster rate with profound further cost

ADDITIONAL BENEFITS

GREENMAN D GREASE is designed to perform exceptionally in areas where water quality and water hardness is an issue. It is specially formulated to react with metal oxides to form a protective film on metal surfaces, while helping to neutralize acidic effluent. GREENMAN D GREASE is intelligently formulated to effectively convert dirt deposits into small suspended particles that rinse away without redepositing on freshly washed surfaces. It is an ideal replacement for limonene, naphtha, mineral spirits, MEK, methylene chloride and other petroleum based solvents.

APPLICATIONS

GREENMAN D GREASE is optimized for removing oil and grease from parking garages, concrete floors, workshops, warehouses, tools, engines, wheels, car parts, car washes, aircrafts, ships, fuel and oil tanks, trucks, metals, and much more.

D - GREASE

Heavy duty degreaser and cleaner with superior oil, petrol and hydrocarbon remediating properties which eliminates waste disposal costs and reduces health and safety risks.

FEATURES OF PRODUCT

- removes oil and grease from surfaces which prevents slip-and-slide accidents.
- Compatible with all type oil / water cleaning systems
- Water based
- Forms protective film on metals
- Non-toxic, non-corrosive
- Eliminates 100% of disposal costs
