

# FABRIC SOFTENER

**Eco-friendly high-performance blend of quality biodegradable components that impart a soft feel to garments while helping to rinse away residual detergent while significantly saving on all associated costs**

## DESCRIPTION

GREENMAN FABRIC SOFTENER is a biodegradable and eco-friendly liquid fabric softener and rinse aid, which is a proprietary blend of cationic and non-ionic surfactants that impart a soft feel to garments, while helping to rinse away any residual detergents that may still be clinging to fabrics after the initial washing process.

## FEATURES AND BENEFITS

GREENMAN FABRIC SOFTENER liquid fabric softener is easy to use and is very economical when compared with traditional products and the traditional method of dispensing, while retaining very high-performance characteristics.

GREENMAN FABRIC SOFTENER restores that "newly delivered" feel to fabric furniture covers, after washing clothes, seats and sofas. Similarly, eco-friendly GREENMAN FABRIC SOFTENER gives a wonderful feel when used in the rinse water after washing fabric car seats and vehicle carpets, leaving a pleasant fragrance in the vehicle.

## CONCENTRATE WITH ACCU DOSE

GREENMAN FABRIC SOFTENER is uniquely formulated in super concentrate versions, which not only saves tremendously on finished product costs by not blending it with mostly water, but it saves very significant storage space, minimizing shipping, transport and logistics costs.

To reduce weight and pack size on average, 95% water content is removed in Fab-Soft concentrate and 80% water content for GREENMAN FABRIC SOFTENER concentrate.

The product is packaged with a unique 1l Accu-Dose dosing bottle which neatly and accurately dispenses in micro increments from 5ml to 50ml for the ultimate in dispensing control, which completely avoids spillage and wastage.

The conventional way of dispensing involves a few inaccurate and unmeasured bottle caps, which can quickly unnecessarily double or even triple product usage. Once an amount is measured out with the Accu-Dose system it is physically impossible to over dispense the required amount.

## RECOMMENDED DOSING LEVELS

Use 10 ml of product per kg of laundry. Increase slightly if necessary.

Use GREENMAN FABRIC SOFTENER with the final rinse water in manual washing or the rinse cycle in automatic washing machines.

## SHELF LIFE AND STORAGE

This product may be stored for up to one year in its original packaging. Store under normal room temperature in a cool, dry place out of direct sunlight.
