

MULTI - USE

Now 10 times more powerful and effective! Our most advanced bio-enzyme all-purpose product cleans surfaces better, eliminates odours quicker, and benefits waste systems rapidly.

GREEN CLEANING TECHNOLOGY

Billions of years ago Mother Nature could keep the earth clean naturally, today this is no longer the case. By using beneficial enzyme producing microorganisms, virtually any organic build up (biofilm, dirt, grime, stains and odours) can be far more effectively cleaned, degraded and removed more so over and above traditional harmful chemicals, now at much lower cost levels. The organic substances are permanently broken down into carbon dioxide and water. Surfaces stay cleaner and shinier for longer.

PRODUCT DESCRIPTION

GREENMAN MULTI-USE is an incredible all in one liquid bio-enzymatic product with a proprietary and powerful blend of 12 different fragrances for a sophisticated and long-lasting smell. GREENMAN MULTI-USE cleans instantly with no contact times required. Our super high foaming technology is increased even further with a foam trigger system, ensuring that even less water is needed.

THE POWER OF 10

In an independently conducted cleaning test, GREENMAN MULTI-USE was challenged against a leading imported bio-enzyme product. GREENMAN MULTI-USE was diluted 10 times more with water, while the imported product was used undiluted. Even at a 10 times higher dilution rate, GREENMAN MULTI-USE cleaned more efficiently, while effectively being 10 times more cost effective. A large part of this incredible performance is that the imported concentrated product contains a variation of 107 CFU per ml while GREENMAN MULTI-USE contains at least 108 CFU per ml, which is an exponential log of 10 more! GREENMAN MULTI-USE now contains 10% more active ingredients for ultimate product performance.

PRODUCT COST SAVINGS

Traditionally going green meant paying far more for a bio-enzymatic product. In countless studies, Greenman technology has matched and surpassed traditional harsh chemicals in cost, while being more effective in performance. In an implementation at a prestigious and highly respected international client, Greenman bio-enzyme and eco-chemical technology was proven to save an amazing 30% to 50% over their traditional chemical spend, while obtaining a level of cleanliness and hygiene their regular chemical products could not hope to match.

PROPERTY COMPANY SAVINGS

On 20 October 2009, Greenman conducted an independent, first-of-its-kind trial with one of the most experienced and respected national facilities managers in South Africa. The facilities management company is highly regarded with numerous blue-chip companies in their care. In an extremely busy washroom environment with between 800 and 1000 daily visitors, pungent urinal odours and plumbing blockages were a constant issue. Regardless of the chemical type and amount applied, their problems seemed unsolvable. Greenman biotechnology easily solved their challenges within a brief 2-week period. The facilities company quickly realized these benefits and made Greenman biotechnology a compulsory tender specification at over 2500 of their buildings nationally. The tender has been successfully implemented for over 8 years, with many millions of Rands likely saved in plumbing blockages for the group, while eliminating washroom odours and achieving a flawless and pristine visual corporate appearance.

MULTI - USE

Now 10 times more powerful and effective! Our most advanced bio-enzyme all-purpose product cleans surfaces better, eliminates odours quicker, and benefits waste systems rapidly.

LOCAL MANUFACTURING BENEFITS

Greenman products are unaffected by expensive fluctuating exchange rates and are entirely manufactured in South Africa. They are EDTA free (a harmful product present in most "green" products) and are uniquely cultivated from South African soils giving them a natural home ground performance advantage. They metabolize faster, reproduce quicker and survive longer. Local manufacturing technology means job creation while helping to stimulate the economy and reduce South Africa's trade deficit. They are truly green with almost no carbon footprint as opposed to importing from across the globe.

LOGISTICS AND DISTRIBUTION

GREENMAN MULTI-USE greatly simplifies and minimizes stock holding, re-ordering, logistics, deliveries and cleaning efficiency by replacing countless conventional chemicals with one safe and reliable product.

PRODUCT SIMPLIFICATION

GREENMAN MULTI-USE safely replaces many products in the workplace and at home. **Do not use harsh chemicals which interfere with our beneficial bacteria. The following chemical cleaning products should be permanently removed from site and be replaced with GREENMAN MULTI-USE** floor, patio, tile, drain, ammonia, bleach, window, mirror, glass, stainless steel, kitchen, furniture, carpet, upholstery, chair, curtain, spot, bathroom, urinal, toilet, mildew, shower, bin cleaners and much more. Remove these chemicals now for a safer environment.

SAFER FOR USER AND ENVIRONMENT

GREENMAN MULTI-USE carries the coveted Eco-Choice label and is locally tested and accredited. It conforms to the highest international Global Eco-Label Network (G.E.N.) standards and is non-toxic, non-volatile and non-corrosive. It is safe for the applicator and the environment.

RECOMMENDED APPLICATIONS

- ✓ Contract Cleaning Companies.
- ✓ Bathrooms, Urinals & Toilets.
- ✓ Offices & Buildings.
- ✓ Washroom Odour Eliminator.
- ✓ Hotels & Hospitality Industry.
- ✓ Odour Eliminator & Deodorizer.
- ✓ Shower Deep Cleaner.
- ✓ Home Cleaner.
- ✓ Drains & Blocked Pipes.
- ✓ Portable Toilet Odour Remover.
- ✓ Pit Toilet Cleaner.
- ✓ Garbage Bins & Refuse Areas.
- ✓ Septic Tank Treatment.
- ✓ Nursery Schools & Schools.
- ✓ Old Age Homes.
- ✓ Pet Spills & Odours.
- ✓ Fly & Mosquito Control.

MULTI - USE

Now 10 times more powerful and effective! Our most advanced bio-enzyme all-purpose product cleans surfaces better, eliminates odours quicker, and benefits waste systems rapidly.

A SAFER ENVIRONMENT

Disinfectants and sanitizers attempt to kill bad pathogens. However, the more these chemical disinfectants are used, the more the pathogens build up immunity to what is trying to kill them, and eventually develop into superbugs which are harmful to humans, and now even harder to kill. By constantly disinfecting, we inadvertently create a food source for pathogen regrowth in a now unchallenged environment, where they grow back even faster and bigger than before. With Greenman bio-technology, our good bacteria rapidly search for food and space and quickly starve the pathogens of their food source. The pathogens die and can't build up immunity to this process. Where disinfectants stop working shortly after application, Greenman bio-technology keeps working for hours or days after application ensuring a cleaner, safer and more productive environment. This process is scientifically known as Competitive Exclusion and is becoming a preferred way of ensuring a healthier way of life.

APPLICATION AND DILUTION

Heavily Soiled = Undiluted. **NB Scrub dirty floor grouting around urinals and toilets weekly!**
Daily Cleaning = 1: 10
Floor Cleaning = 1: 100 to 1: 500

PACKAGING AND SHELF LIFE

Stable for 12 months at normal temperature. Keep out of direct sunlight. Available in 5l, 25l & 1000l flow bins. Super concentrate available for simple self-manufacturing.
